Cyclic mechanical strain of myocytes modifies CapZβ1 post-translationally via the mechanosignaling molecule PKCe. Resting myocytes (lower) or active (upper) after one hour of cyclic strain in confocal images and line scans show translocation of PKCe (red), to Z-disc (green GFP-CapZβ1), and co-localization (yellow), also quantified by line scans. See article by Lin et al. on page 329 in this issue.

Instructions for Authors for J Muscle Res Cell Motil are available at http://www.springer.com/10974
The extended, dynamic mitochondrial reticulum in skeletal muscle and the creatine kinase (CK)/phosphocreatine (PCr) shuttle are working hand in hand for optimal energy provision. The purpose of reviews will be intended to highlight and discuss new data and ideas, not necessarily of the author but certainly discussed from his/her four sides of the Journal, i.e. 3500 words including bibliography and figures (allow 250 words for a simple figure).

References. The purpose of reviews will be to summarize and analyze topics of current interest and propose, a personal viewpoint is encouraged whereas a historical one is not. There are no strict limits on the length of reviews or their illustration but 8000 words of text (exclusive of Bibliography) plus two figures or tables is often found to be satisfactory to both author and reader.

News and Views. These brief reviews are intended to highlight and discuss new data and ideas, not necessarily of the author but certainly discussed from his/her four sides of the Journal, i.e. 3500 words including bibliography and figures (allow 250 words for a simple figure).

Correspondences. Comment on papers published in the Journal can be submitted in the form of scientific correspondence. Such letters should fit one side of the Journal (i.e. 800 words). Correspondence will be published with the original author’s response to the comment, which must fit the same length restriction. Publication of both comment and response are dependent on editorial approval.

Address for any other information: Journal of Muscle Research and Cell Motility, Springer/Biomedical Unit, P.O. Box 17, 3300 AA Dordrecht, The Netherlands.
